

Documentation

What Does This WebApp Do ?

Enter a search query, and the app will give you a list of tweets related to the search query.

How To Use This WebApp ?

1. Clicking on the twitter button will lead you to a twitter verification page, to subscribe you to the app.
2. Enter your query in the search query page. Eg, Alabama
 - a. Choose between the three choices
 - i. **Jaqqard** - Gives you results by taking nouns from the tweets and uses jaccard algorithm to display results. This is the fastest.
 - ii. **Redundant Query Expansion** - Gives you results by matching tweets contextually[uses wikidump to expand the search query and tweets]. This is slower than step (i).
 - iii. **Non-Redundant Query Expansion** - Gives you results similar to step (ii) but reduces redundancy .
3. If you are satisfied with the results. Click on the 'Go Further' button
4. Follow the instructions to create a new twitter id . The users who had the tweeted the tweets on step(iii) , will be sent a message to follow the new twitter id you have created.
